QuestionAnswer What is a solution in chemistry? A solution is a homogeneous mixture composed of two or more substances where one substance (solute) is dissolved in another (solvent). What are common types of solutions based on state? Common types include solid solutions (like alloys), liquid solutions (like saltwater), and gaseous solutions (like air). What is solubility? Solubility is the maximum amount of solute that can dissolve in a solvent at a given temperature and pressure to form a saturated solution. How does temperature affect solubility? Generally, increasing temperature increases the solubility of solids and liquids, but may decrease the solubility of gases in liquids. What is a saturated solution? A saturated solution contains the maximum amount of solute that can dissolve at a particular temperature, and any additional solute will remain undissolved. What is the difference between solute and solvent? The solute is the substance being dissolved, while the solvent is the substance doing the dissolving, usually present in greater amount. What are electrolytes and nonelectrolytes? Electrolytes are substances that

conduct electricity when dissolved in water, like salts; nonelectrolytes do not conduct electricity, like sugar. Why are solutions important in everyday life? Solutions are vital in daily life for processes like cooking, medicine, cleaning, and industrial applications such as manufacturing and chemical reactions.
