## Sample Questions and Explanation of Correct Answers

Below are illustrative examples of typical questions, along with detailed explanations for the correct answers.

### Question 1: Financial Statement Analysis

Q: A company?s current ratio is 1.2, and its quick ratio is 0.8. What does this indicate about the company's liquidity position?

Options:

a) The company has sufficient short-term assets to cover current liabilities.

b) The company relies heavily on inventory for liquidity.

c) The company has poor liquidity and may struggle to meet short-term obligations.

d) The company is overly liquid with excess cash reserves.

Correct Answer: b) The company relies heavily on inventory for liquidity.

Explanation:

The current ratio of 1.2 suggests the company has more current assets than current liabilities, generally indicating adequate liquidity. However, the quick ratio excludes inventory from current assets. Since the quick ratio is only 0.8 (less than 1), it indicates that a significant portion of current assets is tied up in inventories, which are less liquid. Therefore, the company depends on inventory for liquidity, and if inventory cannot be quickly converted to cash, short-term obligations might be at risk.

## Question 2: Credit Scoring

Q: Which factor is most influential when assessing a borrower?s creditworthiness using a traditional credit scoring model?

Options:

a) Length of employment history

b) Past payment history

c) Age of the borrower

d) Number of recent credit inquiries

Correct Answer: b) Past payment history

Explanation:

In most credit scoring models, especially FICO-based systems, the payment history is the most

significant factor influencing the score. It reflects the borrower?s history of paying bills on time, which directly correlates with future repayment behavior. While employment and inquiries are relevant, they carry less weight compared to payment history.

### Question 3: Risk Management

Q: Which of the following is a primary purpose of credit risk mitigation techniques?

Options:

a) To eliminate all potential losses

b) To transfer or reduce risk exposure

c) To increase credit limits arbitrarily

d) To avoid conducting credit analysis altogether

Correct Answer: b) To transfer or reduce risk exposure

Explanation:

Credit risk mitigation techniques such as collateral, guarantees, or credit derivatives aim to transfer or reduce potential losses from defaults. They don?t eliminate risk entirely but help manage and control it effectively.

## Common Challenges in Answering the Inventory Test

Many questions require interpreting complex financial data and making judgments based on incomplete information. Correct answers often depend on a solid understanding of financial ratios, industry norms, and regulatory requirements.
