What Is Menstrual and Pre Menstrual Tension?

Menstrual and pre menstrual tension well woman refers to the physical, emotional, and psychological symptoms experienced by women in the days leading up to and during their menstrual period. While every woman?s experience is unique, many report symptoms such as irritability, bloating, breast tenderness, fatigue, mood swings, and headaches.

Pre menstrual tension (PMT) or PMS usually occurs during the luteal phase of the menstrual cycle?roughly 1-2 weeks before menstruation. When symptoms are severe enough to interfere with daily activities, it may be diagnosed as premenstrual dysphoric disorder (PMDD), a more intense form of PMS.

Understanding the Causes of Menstrual and Pre Menstrual Tension

The exact cause of PMS and menstrual tension remains complex, involving hormonal fluctuations,

neurochemical changes, lifestyle factors, and genetic predispositions.

Hormonal Fluctuations

- Estrogen and Progesterone: The primary hormones regulating the menstrual cycle, their swings directly influence PMS symptoms. A decline in progesterone and estrogen just before menstruation can trigger emotional and physical symptoms.

- Serotonin Levels: Serotonin, a neurotransmitter that influences mood, can be affected by hormonal changes, leading to mood swings, irritability, and depression.

Other Contributing Factors

- Lifestyle Factors: Stress, lack of sleep, poor diet, and sedentary habits can exacerbate symptoms.
- Nutritional Deficiencies: Insufficient intake of magnesium, vitamin B6, calcium, and vitamin D has been linked to PMS severity.
- Genetics: A family history of PMS or mood disorders can predispose women to experience more intense symptoms.

Recognizing the Symptoms of PMS and Menstrual Tension

Symptoms can vary widely, but common physical and emotional signs include:
